

callout-itembox — colour gallery

Built-in colour themes

Every theme sets the bar, background and heading colour together. Call it with `theme=<name>`.

●	theme=blue Deep navy bar on a light blue-grey background. This is the default if no theme is given.
●	theme=red Strong red bar on a soft peach background.
●	theme=teal Dark teal bar on a pale teal background.
●	theme=green Forest green bar on a light green background.
●	theme=purple Deep purple bar on a faint lavender background.
●	theme=orange Burnt orange bar on a warm cream background.
●	theme=slate Blue-grey slate bar on a cool neutral background — a quiet, low-contrast option.

Same themes, body only (no heading)

●	Body-only blue.
●	Body-only red.
●	Body-only green.
●	Body-only orange.

Numbered markers

1	First Use <code>number=1</code> for a numeral instead of the dot.
2	Second Each theme keeps its colours.

A	Alphabet, body only.
1	Vertical number Add <code>vertical</code> to rotate the numeral up the bar.
12	Multi-digit Works for any number, e.g. <code>number=12, vertical</code> .
ABC	Multi-alphabet Works for combination of alphabets, e.g. <code>number=ABC, vertical</code> .

Rounded corners

●	corners=rounded The colored bar follows the curve.
●	Custom radius with <code>arc=8pt</code> , body only.

Drop shadow

●	shadow=on A soft drop shadow lifts the box off the page.
●	Shadow + rounded Combines with rounded corners.
●	Shadowed, body only.

Custom one-off colours

If no theme fits, override any of `barcolor`, `bgcolor`, `headcolor` with any `xcolor` expression.

●	Custom mix Built from <code>xcolor</code> percentages.
●	Override just one Here only the bar is changed; the background and heading still come from <code>theme=blue</code> .
●	Defined colours Pass your own <code>\definecolor</code> names for brand palettes.
